Re: Two Strike Park - SCE Transformer's

Dear Ms. Robinson,

We have been in communication with SCE re the proposed placement of the transformer at Two Strike Park. Currently, they have agreed to move the placement to the north open space of the park. Our current status is that we would like to meet with them at the park prior to submission of final engineering drawings.

With regard to the placement of additional poles and above ground wires: The Crescenta Valley Town Council has established a position that all connecting wires are to be buried underground and no additional poles are to be added on Rosemont Avenue or in the park. In addition, the placement of transformers will need to be well to the back of the clearing with the addition of mature buffering landscaping.

Please find attached the latest communication from Ben Wong via email.
